TriZetto Unify

Forging a new era for payer-provider collaboration

In today's healthcare landscape, both payers and providers face significant challenges due to inefficient data exchange, outdated workflows and complex regulatory requirements. These inefficiencies result in delays, higher costs and reduced care quality. The current payer-provider collaboration framework does not provide enough of the right information at the right time to impact

“moments that matter,” those critical decision points in the care continuum. While some quick-fix provider-aligned platforms offer basic data transfer capabilities, they fail to address the deeper integration and interoperability needs for payers across diverse electronic health record (EHR) systems, payer-internal workflows and payer-specific compliance mandates.

TriZetto Unify—A strategic choice

Our TriZetto® Unify strategy will evolve existing TriZetto products and facilitate the introduction of new components that will reside on the TriZetto Unify platform —designed to bridge the gap between payers and providers. This approach is aimed at fostering better collaboration, reducing costs and improving care quality. Built on open standards such as Fast Healthcare Interoperability Resource (FHIR®) and United States Core Data for Interoperability (USCDI), TriZetto Unify will help support compliance with both current and future regulations. Integration with payer systems and existing workflows, while remaining open to connecting with a variety of provider EHR systems, makes these TriZetto Unify solutions scalable, future-proof options for any healthcare organization.

Integration with payer systems and workflows

The TriZetto Unify platform is engineered to integrate with payer core administration systems such as TriZetto Facets® and QNXT™ and care management systems like CareAdvance®. This means payers don't have to manage separate workflows or manually reconcile data. Whether it's managing prior authorizations, handling claims adjudication or closing care gaps, TriZetto Unify automates the process end-to-end by enabling near real-time, bidirectional data exchange between payers and providers. By removing bottlenecks and breaking down silos, it eliminates the administrative burden on both payers and providers and accelerates decision-making in the moments that matter.

EHR agnostic

Unlike many platforms that favor a specific vendor ecosystem, TriZetto Unify is fully agnostic, meaning it will work across all major EHR systems, and scales effortlessly to accommodate both large provider networks and smaller practices. Payers and providers can exchange data efficiently, regardless of the EHR systems in use, supporting more streamlined care coordination and reducing the complexity that typically comes with diverse system environments.

Open and standards-based

TriZetto Unify is built on industry standards such as HL7® FHIR® and helps organizations comply with emerging interoperability regulations like TEFCA (Trusted Exchange Framework and Common Agreement™). By leveraging these open standards, it ensures seamless, near-real-time data exchange without locking organizations into proprietary ecosystems. This flexibility not only lowers the barrier to adoption, but also helps position payers and providers to stay ahead of future regulatory requirements. As the healthcare industry transitions towards more collaborative data-sharing models, TriZetto Unify's standards-based approach provides a foundation for long-term interoperability.

Aligned with payer compliance mandates

TriZetto Unify is designed with a clear focus on compliance, helping support mandates like patient access, prior authorization and data-sharing requirements. By supporting USCDI and FHIR®, it simplifies the complex regulatory landscape, helping payers and providers comply with current and future interoperability rules. This proactive compliance strategy also reduces administrative burdens, allowing healthcare organizations to focus on delivering value-based care rather than struggling with data governance.

Lower costs

TriZetto Unify is not only scalable and flexible, but also cost-effective. Its cloud-based architecture minimizes infrastructure costs, while automation reduces the need for manual intervention, which can lead to substantial savings. Compared to platforms that often come with hidden costs and lengthy implementations and integrations, TriZetto Unify offers the potential to lower total cost of ownership by streamlining data flows, minimizing errors, and enhancing operational efficiency, especially through synergistic integration with TriZetto payer software.

Why Cognizant?

Cognizant is uniquely qualified to realize the vision of our TriZetto Unify strategy. Today, our core, care, quality and government program products are trusted by hundreds of payers. Our FHIR® interoperability solution supports one in four lives affected by the previous payer interoperability mandate. Cognizant serves as a clearinghouse and intermediary between payers and providers, connecting with 650+ electronic health record (EHR) and practice management system products used by over 360,000 individual providers. We support more than 200 million covered lives and facilitate approximately 4 billion payer-provider data exchanges per year.

Our Unify strategy provides the foundation and agility needed to develop new FHIR-based components over time to support additional payer-provider data exchanges. Get started today with the TriZetto® Unify platform initial component, the [TriZetto® Connected Prior Authorization Solution](#).
