Solution Overview

TriZetto® Cost Estimate Connector

Build personalized cost estimates into your existing member experience

Like many health plans, you strive to continually improve the digital experiences your members expect. Now your organization must incorporate compliant cost-estimating capabilities while maintaining high-quality and seamless functions across all the channels your members use.

Preserve and enhance your member experience while supporting compliance with the Cognizant® TriZetto® Cost Estimate Connector. This set of APIs includes API services that replicate claim processing using data from TriZetto® core platforms. Your IT teams can integrate these APIs within your existing experience to deliver accurate, personalized care cost information and provider comparisons to your members on demand. With the TriZetto Cost Estimate Connector, members have up-to-the-minute cost information as they shop for care while you ensure their experience remains unique to your organization.

Build a compliant solution your way

We developed TriZetto Cost Estimate Connector to help your organization efficiently incorporate compliant cost estimates while retaining the look and feel of your existing member experience. With our APIs, we equip your organization to:

- Deliver multiple treatment estimates and comparisons simultaneously for in-network and out-of-network providers

cognizant®

- Create and modify treatment definitions and profiles, including incorporating multiple services into a treatment definition without IT or custom development

- Replicate the claims adjudication process from TriZetto core platforms for individualized, accurate estimates without committing the record

- Integrate services and data into existing member engagement experiences or into a new solution aligned with your organization's goals and member needs

Support full compliance and deliver a richer experience

TriZetto Cost Estimate Connector delivers functionality that conforms to the requirements of the Transparency in Coverage rule. We also designed flexibility into our APIs so that your organization can accomplish the following:

Add value to your member experience

Deliver the detailed, accurate information your members need to make more informed decisions about provider selection and cost of care. With our APIs, members can compare up to five providers. Our flexible treatment definition tools ensure estimates are based on how your plans define services versus one-code estimates.

Minimize the impact on your technology

Our APIs align with the TriZetto product portfolio to ensure continuing compatibility with data from TriZetto core platforms and modules, minimizing maintenance and upgrade efforts. Through preintegration with our core platforms, our APIs take advantage of our data orchestration capabilities to efficiently generate estimates.

Empower your business users

Self-service administration tools equip your business development users to develop and maintain treatment profiles and definitions based on plan networks without customization. This self-service capability reduces the number of IT tickets and calls needed to make changes, helping ensure estimates are accurate and based on current plan and benefit designs.

Preserve your unique experience design

Implement our APIs your way. Our Cost Estimate Connector gives you flexibility in how to integrate personalized treatment estimates into your existing solutions, technology and experience. With our configuration tools you can create, tailor and maintain treatment definitions and profiles based on member benefits and provider networks.

Support compliance and greater member satisfaction

Improve member satisfaction with flexible, seamless integration of cost-estimation capabilities into your member experience solutions. For more information about how the TriZetto Cost Estimate Connector can provide the detailed, accurate treatment estimates and provider comparisons members increasingly expect.
